

GTX

The next generation
of oyster farming

For more than 20 years SEAPA has been partnering with oyster farmers around the world. We have put all the knowledge gained through these relationships into the GTX. Incorporating the latest in oyster farming technology, the GTX has been designed for the future with multiple mounting points for new accessories to be added to our range.

New highlights of the GTX basket

- Innovative, quick and simple assembly
- 20L volume to optimise farm density and efficiencies in handling
- Locking bar and concave base for unsurpassed basket strength
- SEAPA's most durable clip attachment mechanism yet
- Dedicated mount for optional name plate
- Basket fill markers to get the right densities every time
- More than 30% increase in mesh thickness compared to SEAPA's 15L basket for the longest life yet

SEAPA[®]

Stocking density*

- 450 x 1" oysters at first fill
- 90 x 3" market size oysters

Dimensions

- 26" L x 11 3/4" W x 7" H

Mesh size

- 12mm available now

Volume

- 20 liters

Weight

- 2.42 pounds

Specifications

Features you expect in every SEAPA basket

- Oval shape to maximize rumbling
- Suitable for use on intertidal and subtidal farms
- Secure door latch which needs only one hand to operate
- All parts purpose made, no single-use plastic
- Baskets made from polypropylene which can be recycled
- Clips specifically designed for high movement environments
- Modular design for easy maintenance and customization
- Common length and clip positions to maximize use of existing infrastructure

Increased lifespan

The GTX incorporates SEAPA's latest evolution in clip design. The basket is allowed to pivot at the line and base of the clip. Large contact areas at all points of movement effectively distribute weight to minimize wear and increase clip life which reduces the need for basket maintenance.

* Stocking densities advised are for general purposes only. Densities are site and species-specific. Each farm will need to conduct multiple tests to ensure the correct volume is selected for each unique farming and environmental condition.
